Crossing to the UK is very dangerous, this information may save your life

Do not try without an engine.

Stay far away from ships. They make big waves and don't see you.

At sea it is colder and there is more wind than on land.

Check the weather before. Beware of fog and wind over 10 knots.

Do not try if waves are higher than 0.5 metre.

Never get out of the boat or try to swim.

FOR RESCUE ■ CALL 112

112 should work even if your phone doesn't have signal

When you call 112 say you are at sea and need rescue

If your phone has French network call 196 to speak directly to the French coastguard

GPS

## GIVE YOUR GPS LOCATION WHEN YOU CALL FOR HELP!

Without signal or data **GPS still works** and you can **still call 112!**

1 Make sure "Location" is on and open **GoogleMaps** or similar
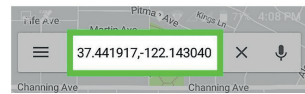

2 Press the **target button**. It may take awhile, but your position will appear as a **blue dot**. Even in the **sea** this dot is your correct position!

3 Press and hold this **blue dot** to "drop a pin" on your current location

4 Your GPS coordinates should appear at the top of your screen. If not, scroll down to look for them
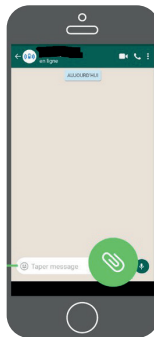

37.441917,-122.143040

5 Give these numbers over the phone when you call for help. Say all numbers and symbols (– , " . ' °) slowly and clearly.

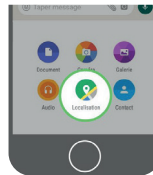

If you have data, use **WhatsApp** to easily send your location

**1** Make sure "Location" is on and open **WhatsApp**

2 In the message with the person who you want to receive your location, press on the **Paperclip icon**

3 Press the **Location** symbol

4 Send your **Current Location**, NOT your Live Location!

Always call 112 first. If rescue does not come or you are being pushed back **you can call Alarm Phone 00 33 4 86 51 71 61**
